Introduction of dodoker:

dodoker is a blockchain technology platform leveraging on web technology and media influences providing an option for the public's charity donation. For the people, made by people.

dodoker's circumstance:

One of the most common problems charity faces, the lack of transparency of where donated funds go to. This lack of trust between charities and donors reduces the willingness of donation from donors.

Solution for dodoker:

With blockchain technology, transactions are not put onto public space making them transparent entities. Transparency of cash flows can be improved by allowing the public to access information of charity projects. All the projects on dodoker are recorded on the smart contracts of Ethereum blockchain, including the project name, funding period, target amount and cash flows etc. Hence, people can review all the details on the third party blockchain website known as Etherscan anytime. With smart contract, the owners of projects are also able to distribute the funds freely and transparently. Further enhancing the accountability, the progress of projects and donated funds are divided into three stages. Donors can evaluate the execution of projects at every stage and withdraw donations if the outcome is not in line with their expectation.

Tech solution   **Problem solving**   **Transparency**
